

What's new in vSphere Web Services SDK - Webinar - PDF Presentations

Abstract: VMware vSphere Web Services SDK (formerly known as the VMware Infrastructure SDK) provides the interfaces to programmatically manage the VMware vSphere platform. This session explains the new features and discusses best practices for the new SDK. This can help the vSphere Web Services SDK application designers and developers immensely with various usage scenarios.

Level: Advanced level session, so it assumes that the attendees have some familiarity with VI SDK
