

What average KBps do you see? ...

Ok, I know it depends on so many factors, # of disks, speed, controllers etc but I'm trying to gage what others see.

My reason for this question.

Deployment of templates to an 8 disk group on an EVA is so slow.

I'm seeing Real time disk KBps as follows:

vmhba1:01 Average = 9937

vmhba1:02 Average = 19

vmhba1:01 Average = 6247

vmhba1:02 Average =7024

servername disk usage (Average Rate) = 23242

I've not taken average measurements from other deployments so dont have any points of reference other than I know it's normally much quicker.

Maybe this thread [Open unofficial storage performance thread](#) helps.
