

VMware-workstation-6.0.2-59824.exe ...

[noisedoctor](#) 1 posts since

Nov 2, 2007 not sure where to post something like this... but, a little frustrated. I upgraded to VMware-workstation-6.0.2-59824.exe and it suddenly broke the samba share I had on a fedora core image. I uninstalled and went back to VMware-workstation-6.0.0-45731.exe and it works. is there somewhere I should report this sort of thing?
