

# LOOOONG startup times of Windows Xp ...

---

neptune2000 52 posts since

Dec 28, 2007 I've been using Windows Xp Home Edition for over 2 months now, and progressively the times between the initial logo screen that come up when I start Xp from VMware Fusion and the blue welcome screen have grown to 1, 2, 3, and now 5 minutes of "black" screen before the blue "welcome" comes up. What may be the origin of this and how do I fix it? Thanks.

Just to add to the question, here is my vmware-vmfusion.log. I see a lot of "invalid", "cannot load", and "could not open".
