May 10, 2006 What's wrong with the forum?!?!

I replied an "old" thread of mine and created a new one which still is visible in "my open questions"

But whenever I click it I get:

System Error

* The specified thread was not found.

And next to that my replies to the "old" thread also disappeared

This is a known issue and VMware is working on it.

See [System Errors, Thread Not Found, Old Posts](#) and [What's going on - System Error & missing replies to my thread](#)
