Mar 13, 2008 Hi,

I have a MacPro with two physical ethernet network cards. I want the Mac to use one physical network and the VM to use the other. How can I configure this in VMware 2.0?

There's currently no UI to do this, but it's possible by editing boot.sh. As noted in [A Power User's Guide to VMware Fusion](#), see [How to modify Fusion network settings whitepaper](#) and [Scripts to manage Fusion network settings](#).
