Jul 15, 2008

I am trying to use the example Change IP powershell on [Managing VMware with PowerShell FAQ](#) but keep getting the same error.

The term 'Find-EntityView' is not recognized as a cmdlet, function, operable program, or script file. Verify the term and try again.

Any better examples or can someone tell me what I may be missing? All I am changing from the Example is the values that is has in red.

Hi, there was some old stuff in the FAQ that I have just updated. Could you try again?

in response to: [c_shanklin](#)

Tried the new sample, changing out he "<Target IP Address>" with the new IP and "Test" with the VM Name. Getting the following error.

Unexpected token 'vmclonespec' in expression or statement.

More Info

Believe i am running latest toolkit "VMware VI Toolkit for Windows 1.0 build 113525" is what is reported in ps.
