Dec 7, 2008 Does anyone know why XP Professional with Fusion 2.0.1 would make restore points every few seconds with the title "Printer Driver TP PS Driver number-number-number installed"? I recently noticed that it has been doing it for a week. Tags: fusion2.0, leopard, mac, vmware_fusion, windows_xp, restore_points, printer_driver

Try disabling printing passthrough if it's enabled (under Virtual Machine > Settings > Printing). If this fixes it, do you have any third-party printer drivers or software installed in the guest which might cause it to be making restore points?
