All,

I have vmware ws installed on my windows xp laptop . and initially i created a windows xp guest with 5GB . and now it is running out of space.

and I want to add another 5GB to the guest windows xp . Can anyone please point me to a proper docs . appreciate any suggestion.

thanks in advance

 in response to: [oreeh](#) i was able to do it by first using vmware diskmanager to increase the partition size and then using the free tool EASEUS from www.partition-tool.com to increase my C: drive on guest o/s

thanks
