

What host server is supported for ...

[halr9000](#) 814 posts since

Jun 7, 2007 This is my 3.5 server. I'm guessing that this is only for ESXi, is that correct?

```
PS > Get-VMHostSysLogServer
-VMHost tupac*
Get-VMHostSysLogServer : 3/23/2009 12:27:12 AM
Get-VMHostSysLogServer      F95EF5F8-630B-4E
2C-9FFB-0B28B440C112      SysLogServer is not supported for host
'tupac.gatest.iss.net'.
At line:1 char:23
+ Get-VMHostSysLogServer <<<< -VMHost tupac*
+ CategoryInfo          : InvalidArgument: (:)
[Get-VMHostSysLogServer], VimException
+ FullyQualifiedErrorId :
Client20_SystemManagementServiceImpl_ThrowSysLogServerNotSupp
ortedException_MissingSysLogInfo,VMware.VimAutomation.Commands.Host.GetVMHostSysLogServer
```

It would be a great help to me if someone could post an example of what the syslog server output looks like, and bonus points for Set-VMHostSyslogServer.

Looks like you're right about ESXi only (before you say it, yes it would be nice to have a little compatibility matrix for each cmdlet).

```
C:\> Set-VMHostSysLogServer
-SysLogServer 10.21.4.91 -SysLogServerPort 514

Host                Port
----                -
10.21.4.91          514

C:\> Get-VMHostSysLogServer

Host                Port
----                -
10.21.4.91          514
```
