Hello everybody! I got problem to install Guest OS. Cd-rom not recognizabl for both Host and Clien servers. I am doing as in Guide,

but I allways got massege: not boot filename received and OS not found. Can you give me any halpfull links? Thank you.

Enter in boot menu to be sure to select boot from CD.

And be sure that CD is connected!

Andre

If iwere a gamblin' man.. id say..

Check the CD Rom's Properties.. I bet "Connected / Connected at Powered on" isnt checked...

Tick that and youll see your cd on boot...

CD-ROMs connected in Host and Guest servers. I used them to install ESX server and Virtual Center software.

👤 in response to: [runclear](#) I did that: mark and unmark this option.

CD-rom issue ...

 in response to: [dody](#) well then in that case, are you sure the "cd" is bootable?

I have Dell Precision T7400. I start to install Win Xp us Guest OS from client server Dell 1950. I can see consol screen . Win Xp doesn't recognize HDD. Ok, it means I need sas driver.

Where can I download this driver? And T7400 doesn't have floppy drive (Ok, I have USB external). I try to download some sas driver from Dell site and connect external floppy. And additional, I push "floppy drive" button on Client GUI. Not successful. Do We have somewhere ISO floppy files???

Thank you.
