Jun 16, 2009

I install esx4.0 on dell 1420, but blocked. I got the following message when boot from cd.

Kernel-panic-not syncing;Unsupported BIOS setting(CPUID is limited)

Disable 'limit cpuid value' or 'support legacy/nt4 os' in bios

CosSup:406 vmkernel not loaded: cannot psod

i searched on net, found add "nocheckCPUIDLimited" can resolve the same problem when install esxi 4.0. But it doesn't work with esx 4.0. Any one has ideas? Thanks in advance.

I am Planning to install Esxi on dell sc1420. Is it possible? And any one knows about the procedures.

Thanks in advance

Esxi 4.0 can install successful in my dell 1420. You can have a try.
