

Event log error ...

I'm getting an error every 30 secs. or so. The description is, "Maximum (3) number of hosts allowed for this edition of vCenter Server has been reached"

Thing is... I don't really care. I know I can only have 3 hosts. That's all I need. I've got 3 hosts connected, and I'm not trying to connect more. I'd like to use the event log to look for problems, but can't if I have to wade through over 2000 of these useless errors a day.

How can I get rid of these? thanks.
