

# Two users using one computer ...

---

[jshellman](#) 9 posts since

Feb 3, 2007 I found this:

<http://www.tomshardware.com/forum/237498-44-users-computer-tutorial-simplified>

That tutorial is for vmware workstation, but is it possible to accomplish that with one of vmware's free products?

Trying out the player, I don't see any way to control which devices the guest and host operating system uses.

Thanks!

you could give VMware Server a shot

it is free
