does anyone know where to read some success stories for SRM & View implementations? If not, do you have a success stories for one of the solution in production? Please specify your environment below.

1. SRM or View implementation?
2. Number of hosts?
3. Storage vendor/types?
4. Replication DR solution?
5. what are the best practices you've used to successfully implemented your solution?
6. what are you problems that you've encountered and want to share so anyone can avoid for future deployment?
7. what do you use for networking for DR site (stretched VLAN or Re-IP)
8. what are your recommendations to someone looking to implement same solutions?

please share your solutions so someone can determine success rate analysis. thank you enjoy holiday everyone.

hi

go to www.vmworld.com and register: there is a paper on this if I remember

hope this helps

regards

If you want vendor specific whitepapers, best practice, implementation guides, reference architectures and case studies around View + SRM, your preferred vendor(s) will have these.

👍 in response to: [cjt](#) Each of my clients have different storage solutions and the best one I've worked with is using VMware View 3.0.1 Composer/Linked Clone features and utilize with NetApp NFS solutions with volume snapshot feature, Rapid Clone Utility 2.0 and SMVI to rapidly clone and provisioned massive desktop images so nicely. But if you want to know real world solutions, check out vmware and Netapp websites there are some good case studies to read. Otherwise, someone will fill in their environment and solutions accordingly.
