

# Compiling Error ...

---

[cocobra798](#) 5 posts since

Dec 22, 2006 -Can someone translate for me from this log what is going wrong after I set the VM config file on it's way compiling:

-(I have my config.h file linked, have gcc and gcc++ installed, and have run the runme.pl script in vmware-any-any-update101, but the problem still occurs.

When I run uname -r it show up I have installed 2.6.18-1.2798.fc6. )

"

```
[root@CARTMAN ~]# vmware
vmware is installed, but it has not been (correctly) configured
for this system. To (re-)configure it, invoke the following command:
/usr/bin/vmware-config.pl.
[root@CARTMAN ~]# /usr/bin/vmware-config.pl
Making sure services for VMware Server are stopped.
Stopping VMware services:
Virtual machine monitor [ OK ]
Configuring fallback GTK+ 2.4 libraries.
In which directory do you want to install the mime type icons?
[/usr/share/icons]
What directory contains your desktop menu entry files? These files have a
.desktop file extension. [/usr/share/applications]
In which directory do you want to install the application's icon?
[/usr/share/pixmaps]
Trying to find a suitable vmmon module for your running kernel.
None of the pre-built vmmon modules for VMware Server is suitable for your
running kernel. Do you want this program to try to build the vmmon module for
your system (you need to have a C compiler installed on your system)? [yes]
Using compiler "/usr/bin/gcc". Use environment variable CC to override.
What is the location of the directory of C header files that match your running
kernel?
[/usr/src/kernels/2.6.18-1.2868.fc6-x86_64/include] /usr/src/kernels/2.6.18-1.2868.fc6-i686/include
]Extracting the sources of the vmmon module.
```

Well, the any-any-update-101 is quite old. I think the most recent one was 105. You may want to try that first.

[KevinG](#) 16,980 posts since

Jan 8, 2004 2. **Re: Compiling Error** Dec 22, 2006 4:25 AM

Hi Craig ,

You do **NOT** need the any-any-update patch

When I run unam -r it show up I have installed 2.6.18-1.2798.fc6. )

/usr/src/kernels/2.6.18-1.2868.fc6-i686/include

You need the matching kernel and kernel-devel packages

Please post the output from the following command

```
rpm -qa --queryformat "%{NAME}-%{VERSION}-%{RELEASE}-%{ARCH}\ n" | grep kernel | sort
```

in response to: [cocobra798](#) I did not ask for the output of all the packages installed on your system.

Please copy and paste the following and run it.

I believe that the original psoting may have had syntax errors.

```
rpm -qa --queryformat "%{NAME}%{VERSION}%{RELEASE}%{ARCH}\n" | grep kernel | sort
```

The output from the above command should be a short list of only the kernel packages installed.

```
[/usr/src/kernels/2.6.18-1.2868.fc6-x86_64/include] /usr/src/kernels/2.6.18-1.2868.fc6-i686/include
```

You are using the wrong include directory for you x86\_64 kernel

You should use

```
/usr/src/kernels/2.6.18-1.2868.fc6-x86_64/include
```

Please post the output from

```
rpm -qa | grep -i kernel
```

[cocobra798](#) 5 posts since

Dec 22, 2006 5. **Re: Compiling Error** Dec 23, 2006 9:49 PM

Compiling Error ...

The first command, (rpm -qa --queryformat "%{NAME}%{VERSION}%{RELEASE}%{ARCH}\n" | grep kernel | sort) has the same log list but for the second (rpm -qa | grep -i kernel) I got

```
[root@CARTMAN ~]# rpm -qa | grep -i kernel
kernel-headers-2.6.18-1.2868.fc6
kernel-headers-2.6.18-1.2798.fc6
kernel-devel-2.6.18-1.2849.fc6
kernel-2.6.18-1.2798.fc6
kernel-devel-2.6.18-1.2868.fc6
kernel-2.6.18-1.2868.fc6
[root@CARTMAN ~]#
```

[KevinG](#) 16,980 posts since

Jan 8, 2004 6. **Re: Compiling Error** Dec 24, 2006 3:48 AM

in response to: [cocobra798](#) Like I said in my previous posting, you are using the wrong kernel-devel and kernel-header package for the running kernel

[singk](#) 6 posts since

Dec 22, 2006 7. **Re: Compiling Error** Dec 26, 2006 8:29 AM

in response to: [KevinG](#) KevinG,

I have similar problem. I had upgrade from 10.1 to 10.2, and now my VMware is not working. Here's an output of my Kernel list

```
# rpm -qa | grep -i kernel
kernel-source-2.6.18.2-34
kernel-um-2.6.18.2-34
kernel-smp-2.6.16.21-0.25
kernel-kdump-2.6.18.2-34
kernel-xen-2.6.18.2-34
linux-kernel-headers-2.6.18.2-3
kernel-syms-2.6.18.2-34
```

Help please..

[bossi](#) 1 posts since

Mar 17, 2007 8. **Re: Compiling Error** Mar 17, 2007 9:43 AM

in response to: [singk](#) after i have upgrated fedora 6 from kernel 2911 to 2925, the vmware-config.pl did not work anymore.

I believe i have the correct kernel source installed.

Compiling Error ...

rpm -qa | grep -i kernel | sort gives the following output:

```
kernel-2.6.19-1.2911.6.5.fc6
kernel-2.6.20-1.2925.fc6
kernel-devel-2.6.20-1.2925.fc6
kernel-doc-2.6.20-1.2925.fc6
kernel-headers-2.6.20-1.2925.fc6
kernel-xen-2.6.19-1.2911.6.4.fc6
kernel-xen-2.6.19-1.2911.6.5.fc6
kernel-xen-devel-2.6.19-1.2911.6.5.fc6
```

the procedure of wmware-config.pl is the following:

Making sure services for VMware Player are stopped.

Stopping VMware services:

Virtual machine monitor [ OK ]

Configuring fallback GTK+ 2.4 libraries.

In which directory do you want to install the mime type icons?

[/usr/share/icons]

What directory contains your desktop menu entry files? These files have a .desktop file extension. [/usr/share/applications]

In which directory do you want to install the application's icon?

[/usr/share/pixmaps]

Trying to find a suitable vmmon module for your running kernel.

None of the pre-built vmmon modules for VMware Player is suitable for your running kernel. Do you want this program to try to build the vmmon module for your system (you need to have a C compiler installed on your system)? [yes]

Using compiler "/usr/bin/gcc". Use environment variable CC to override.

What is the location of the directory of C header files that match your running kernel? [/usr/src/kernels/2.6.20-1.2925.fc6-i686/include]

Extracting the sources of the vmmon module.

Building the vmmon module.

Using 2.6.x kernel build system.

```

```
make: *** [vmmon.ko] Error 2
```

```
make: Leaving directory `/tmp/vmware-config5/vmmon-only'
```

Unable to build the vmmon module.

For more information on how to troubleshoot module-related problems, please visit our Web site at "<http://www.vmware.com/download/modules/modules.html>" and "[http://www.vmware.com/support/reference/linux/prebuilt\\_modules\\_linux.html](http://www.vmware.com/support/reference/linux/prebuilt_modules_linux.html)".

Execution aborted.

???????

the uname output is:

```
uname -a
```

```
Linux quatro 2.6.20-1.2925.fc6 #1 SMP Sat Mar 10 19:15:16 EST 2007 i686 i686 i386 GNU/Linux
```

please help me ...

👤 in response to: [bossi](#) Remove the following packages since you can not use a xen kernel with VMware installed

```
kernel-xen-2.6.19-1.2911.6.4.fc6
```

```
kernel-xen-2.6.19-1.2911.6.5.fc6
```

```
kernel-xen-devel-2.6.19-1.2911.6.5.fc6
```

You will most likely need to apply Petr's patch to be able to use that kernel version (kernel-2.6.20-1.2925.fc6 )

Petr's unofficial vmware-any-any-update108.tar.gz can be found here

<http://knihovny.cvut.cz/ftp/pub/vmware/>

Compiling Error ...

Jan 2, 2008 10. Re: **Compiling Error** Jan 2, 2008 3:07 AM

 in response to: [KevinG](#) Hi KevinG,

I think that i have the same kind of problem. Maybe you can help me cause i can't see the problem.

I am using kernel 2.6.23.8-34-fc7 and have the following kernel packages installed:

kernel- 2.6.21-1.3194.fc7

kernel-headers- 2.6.23.8-34.fc7

kernel-devel- 2.6.21-1.3194.fc7

kernel-devel- 2.6.23.8-34.fc7

kernel- 2.6.23.8-34.fc7

After installing FC7 i did an yum update, after that i installed vmware server 1.0.4.

When running /usr/bin/vmware-config.pl i got the following error:

1. None of the pre-built vmmon modules for VMware Server is suitable for your
2. running kernel. Do you want this program to try to build the vmmon module for
3. your system (you need to have a C compiler installed on your system)? [yes](#)

1. Using compiler "/usr/bin/gcc". Use environment variable CC to override.
2. What is the location of the directory of C header files that match your running
3. kernel? [/lib/modules/2.6.23.8-34.fc7/build/include]

1. Extracting the sources of the vmmon module.

1. Building the vmmon module.

1. Using 2.6.x kernel build system.
2. make: Entering directory `/tmp/vmware-config0/vmmon-only'
3. make -C /lib/modules/2.6.23.8-34.fc7/build/include/. SUBDIRS=\$PWD SRCROOT=\$PWD/. modules
4. make[1]: Entering directory `/usr/src/kernels/2.6.23.8-34.fc7-i686'

Compiling Error ...

Do you have any idea where i can looking for?

Thanks in advance!

Martijn

I was to fast posting my question  The following post worked for me:

<http://communities.vmware.com/message/784356#784356>
