As you can see I am trying to convert te standard Virtual Server (MS) image that I download from Microsoft with Exchange 2007.. Help is needed or Vmware Converter needs to be updated with the new format.

VMWARE converter 3.01 doesn't convert ...

Also tried importing with Vmware Workstation 6.. same problem...

can you not install converter directly to the virtual machine while powered on? then simply choose "physical" and "this local machine"

also, "Impersonating user jotten" - highly suggest to use local admin instead
