

The screenshot shows the VMware vCenter Orchestrator Configuration interface. The title bar reads "VMware vCenter Orchestrator Configuration" and includes "Logout" and "Help" buttons. On the left is a navigation pane with the following categories: General, Network, LDAP, Database, Server Certificate, Licenses, Startup Options, Log, Troubleshooting, Plug-ins, Mail (1.1.1), SSH (1.0.3), Active Directory (1.0.0), vCenter Server 4.1 (4.1.0), and vCenter Server 4.1 (4.1.0). The "Active Directory" category is selected, and its configuration page is displayed on the right. The "Active Directory" page has a "Copy from LDAP configuration" checkbox. Below this are fields for "LDAP host:", "Port (default: 389):", "Root:", "URL:", and "Default domain:". There is a "Use SSL" checkbox. A note states "The user must have full browsing rights on Active Directory". Below the note are fields for "User name:", "Password:", "Use a shared session" checkbox, "User name for shared session:", and "Password for shared session:". At the bottom right of the configuration area are "Apply changes" and "Cancel" buttons.
