

Check and Set AdvancedParameter Config for Host

Gets the Values from the Configuration Element and Checks if the Values are set.

Use "Configure AdvancedParameter Config Check" Workflow to configure Values you want to be reflected on the Host.

1. Versions

Version	Date	User	Comment
---------	------	------	---------

Current version:0.0.0

Host	Host System to be checked for Parameters	

5. Workflow schema

6. Workflow items

Name	Type	Next item	Description
Get all configured Advanced Parameters from Config element	WorkflowItemTask	Attributes left?	
Attributes left?	WorkflowItemCustom Condition	get Attribute	
get Attribute	WorkflowItemTask	setHostAdvancedParameter	
	WorkflowItemEnd		
setHostAdvancedParameter	WorkflowItemTask	Attributes left?	

7. Source code for the used actions

7.1. Get all configured Advanced Parameters from Config element

```
Attributes=ConfigurationElement.attributes;
```

7.2. get Attribute

```
var Attribute = Attributes.pop();  
Parameter = Attribute.name;  
var type = Attribute.type;
```

```
value = Attribute.value;
```

```
System.log(Parameter);  
System.log(value);  
System.log(Attribute.type);
```

7.3. setHostAdvancedParameter

```
//Auto generated script, cannot be modified !  
System.getModule("com.vmware.pso.host.config").setHostAdvancedParameter(host,parameter,pmv  
alue) ;
```
