

VMware vRealize Suite Lifecycle Manager

KEY BENEFITS

- Accelerate time to value – Simplify and speed up deployments, upgrades and patches with automated pre-checks and validations.
- Minimize ongoing management – Optimize ongoing product and content management by automating the management of certificates, licenses, users, passwords, configurations and content across the vRealize Suite product portfolio.
- Enable best practices – Enforce alignment with VMware recommended reference architectures and validated designs.

The best way to manage VMware vRealize Suite

VMware vRealize® Suite Lifecycle Manager™ delivers a comprehensive, integrated product and lifecycle management solution for VMware vRealize Suite, helping customers speed up deployments and updates, optimize and automate ongoing product and content management, and apply Day 0 to Day 2 operational best practices across all components of vRealize Suite. Whether you are using individual vRealize product components or different vRealize Suite editions, always start with vRealize Suite Lifecycle Manager to maximize the benefits of vRealize Suite by optimizing the time and effort invested.

Integrated vRealize Suite lifecycle management solution

vRealize Suite provides customers of vRealize Automation, vRealize Suite and VMware Cloud Foundation™ with enhanced capabilities for hybrid cloud operations, compliance and DevOps-based automation. These capabilities include:

- Dedicated infrastructure multitenancy support – Enable cloud admins to easily manage parent and tenant organizations via dedicated infrastructure multitenancy support in vRealize Automation.
- Enhanced VMware Cloud Foundation and SDDC Manager integration – Automatically detect VMware Cloud Foundation and SDDC Manager components (e.g., management and workload domains) when deploying vRealize Suite components. This provides a unified view to deploy, manage, upgrade and patch vRealize Suite components in VMware Cloud Foundation environments, while minimizing the management footprint.
- Rapid installation – Simply and flexibly deploy vRealize Suite Lifecycle Manager with Easy Installer, automated pre-checks and validations.
- One-click upgrade – Enable easy rollback with the simplified upgrade and patching process with an environment snapshot function.
- Easy ongoing management – Automate the management of certificates, licenses, users, passwords and configurations.
- Content lifecycle management – Automate the deployment of vRealize software-defined content, such as vRealize Automation blueprints and vRealize Orchestrator™ workflows, across multiple users and environments. vRealize Suite Lifecycle Manager integrates with Bitbucket, GitHub and GitLab for enhanced content sharing and version control.
- In-product marketplace – Easily leverage and consume out-of-the-box content curated by VMware and ecosystem partners via [VMware Solution Exchange](#) integration.
- Best practice implementation – Ensure deployments are optimized for scale and performance via alignment with VMware recommended reference architectures and validated designs (VMware Validated Design™).
