Changes are coming to AirWatch Reports – How to Prepare by **Jordan**

With the next major release of the AirWatch console (version and release date TBA), AirWatch will be enhancing the admin reporting experience. Several new reports will be introduced with a focus on improved performance. These reports will appear at the top of the **All Reports** list view.

As soon as your environment is upgraded, you'll want to take time to familiarize yourself with the new reports and begin migrating to them because AirWatch will be phasing out the legacy reports. Legacy reports are denoted by a 'Deprecated' label next to the report name.

○	Deprecated Active Inactive Users By Location	Devices	Summary of active/inactive users at a selected point in time
○	Deprecated Admin Account Login History	User Management	Login history for selected admin accounts
○	Deprecated Admin User Roles	User Management	Lists all Admin users with their roles by Organization Group

In terms of a timeline, you should expect that the second Feature Pack of the release will no longer include these legacy reports. This means that if you are in a shared SaaS environment, you will have approximately 2 months between GA and FP2 to make the transition.

Migrating to the New Reports

In order to help you plan your migration from legacy reports to the new reports, we have created a matrix that summarizes the new reports and shows you which deprecated reports they are intended to replace.

Once you find new reports to replace any legacy reports you are using, you'll want to change your report subscription settings to leverage the new reports.

New Report Name	Replaces these Deprecated Reports	Attributes Included in New Report
Device Inventory	Device Compromised	Organization Group ID
	Device Count	Organization Group Name
	Device Details By Location	Device ID
	Device Down	Friendly Name
	Device Down - WLAN	Username
	Device Down - WWAN	E-mail Address
	Device Inventory Detail	Frist Name
	Device Inventory Detail - WLAN	Last Name
	Device Inventory Detail - WWAN	Display Name
	Device Inventory Detail By Organization Group	Serial Number
	Device Inventory Summary	Device Platform
	Device Inventory Summary By Location	Device Model
	Device MDM Detail	Phone Number
	Device Roaming	Owner

	Device Roaming Detail	OS Version
	Device Storage Detail	Enrollment Date
	Devices Enrolled	Compliance Status
	Devices Last Seen - WLAN	Enrollment Status
	Devices Last Seen - WWAN	Unenrollment Date
	Device Last Seen - WWAN By Location	Managed By
	Device Not on AC power	Last Seen
	Devices Offline X Days	Asset Number
	Device On AC Power	Is Compromised
	Devices Unenrolled	Find My iPhone

Legacy Reports with No Migration Path

For a handful of very infrequently used reports, AirWatch does not plan to create a migration path. For the reports listed below, there is no new report that acts as a one to one replacement. If you have any concerns or would like to request a new report be added, you can either open a Support Request or submit a Feature Request.

- Content Near Expiration
- Devices with Unassigned Locations
- Document Analytics by Date
- iOS 7 Compatibility
- Product Compliance

- Product Deployment Summary
- Provisioning Detail
- Provisioning detail currently assigned
- Provisioning Summary
- Provisioning summary Currently Assigned
- SIM Inactive Summary
- Windows Mobile Agent Migration
- Provisioning Product Assigned
- MDM Agency Charge Back
- Customer Billing
