

The ProLiant servers listed below are organized into VMotion compatible groups. VMotion to and from any Server/Processor combination within a group is expected to be compatible, however, actual compatibility results may vary. This document will continue to be updated as new processor and server combinations are released by HP. Please use this document as a guideline with the understanding that new processor releases and processor steppings affect the content and compatibility listed by this document.

The following content is grouped by default VMotion compatibility. It is possible to make configuration changes which will allow VMotion between groups, ie AMD Opteron Rev E to Rev F. For additional information regarding VMotion compatibility, please see the following VMware Knowledge Base Articles:

[Intel VMotion – KB 1991](#)

[AMD VMotion – KB 1992](#)

[Migrations Between Rev E and Rev F AMD CPUs](#)
