

First time configuring WorkspaceOne

In the VCO new UI orchestrator – Secure – Access

I entered all the requested parameters but kept receiving this error message.

What am I doing wrong

The screenshot shows the VMware Orchestrator interface for configuring Secure Access. The main panel is titled "Workspace ONE UEM Configuration" and includes the following details:

- Header:** "Validate and configure Workspace ONE UEM to facilitate Tunnel connection to the DNS name provided."
- Error Message:** "UEM credentials or configurations are invalid, please check and try again" (highlighted in a red box).
- Configuration Fields:**
 - DNS Name:** sase-mss.sa.gsm.vmware.com
 - Workspace ONE UEM environment:** (empty field)
 - UEM API URL:** https://as1688.awmdm.com/API
 - UEM Org Group ID:** MEMB2674
- Workspace ONE UEM Credentials:** (empty section)
- Brief Description:**
 - > 1. DNS Name
 - > 2. UEM API URL
 - > 3. UEM Org Group ID
 - > 4. UEM Login/Password
 - > 5. Configure Tunnel
- Buttons:** CANCEL and CHECK
