

Iphone Issue  
June 15, 2010  
VMWare Workstation 7.1

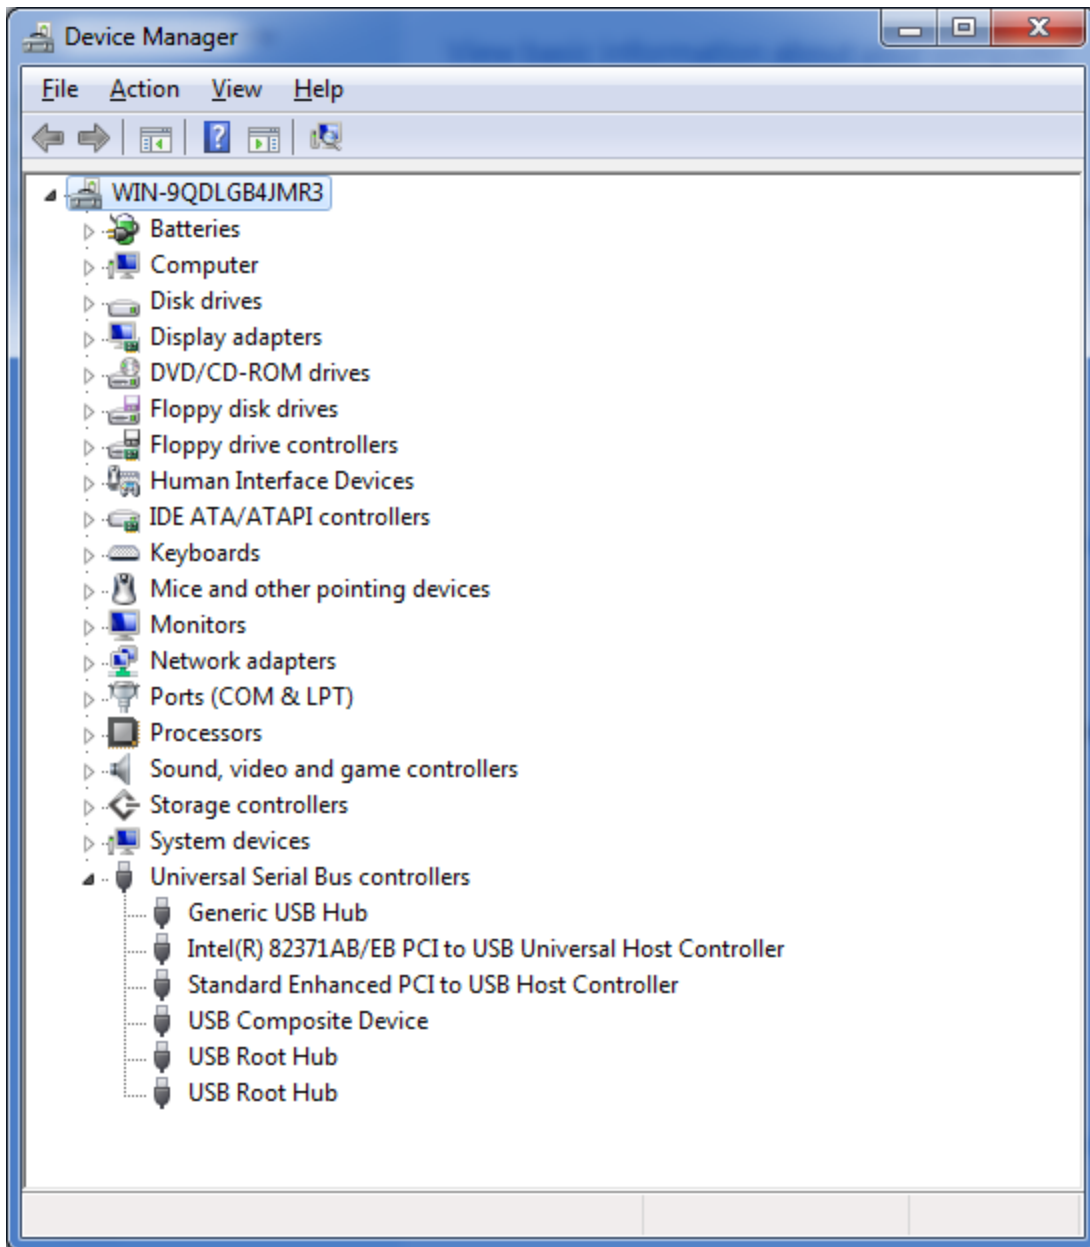

Note this worked fine with WS 6.5

Below is shot from HOST which Windows 7 Ultimate, See Iphone listed.

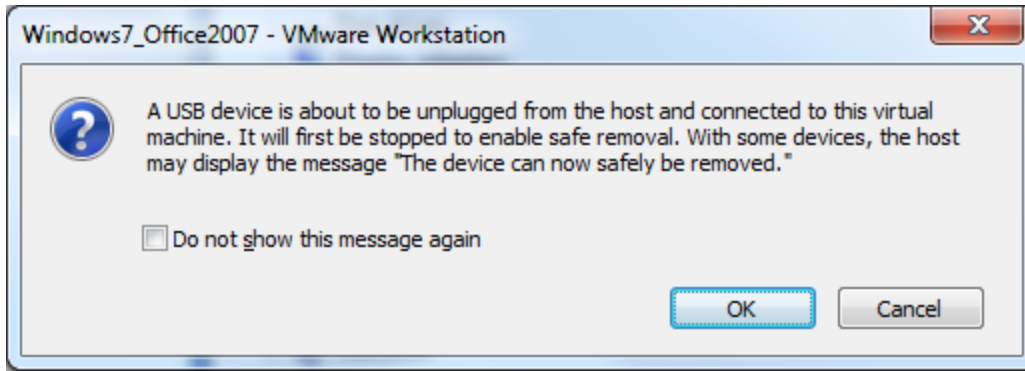

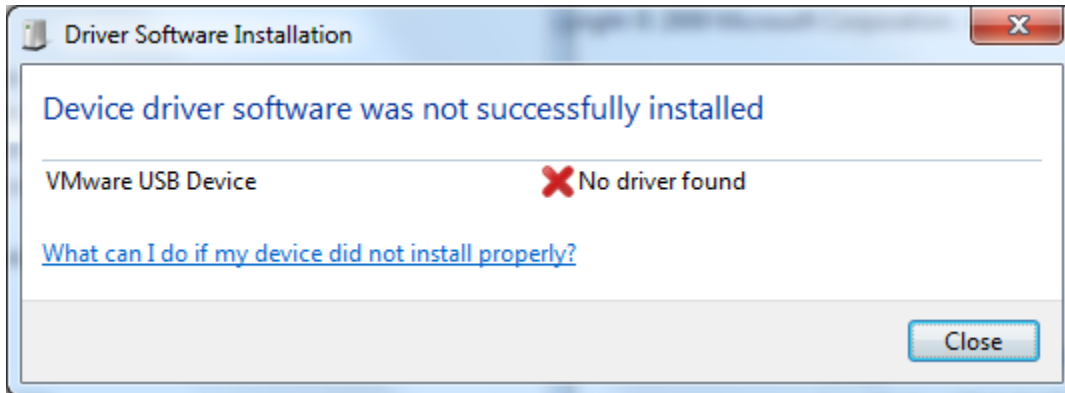

Showing Windows 7 Ultimate Guest VM note the ICON showing an Apple iPhone lower right corner. Full screen with focus in VM

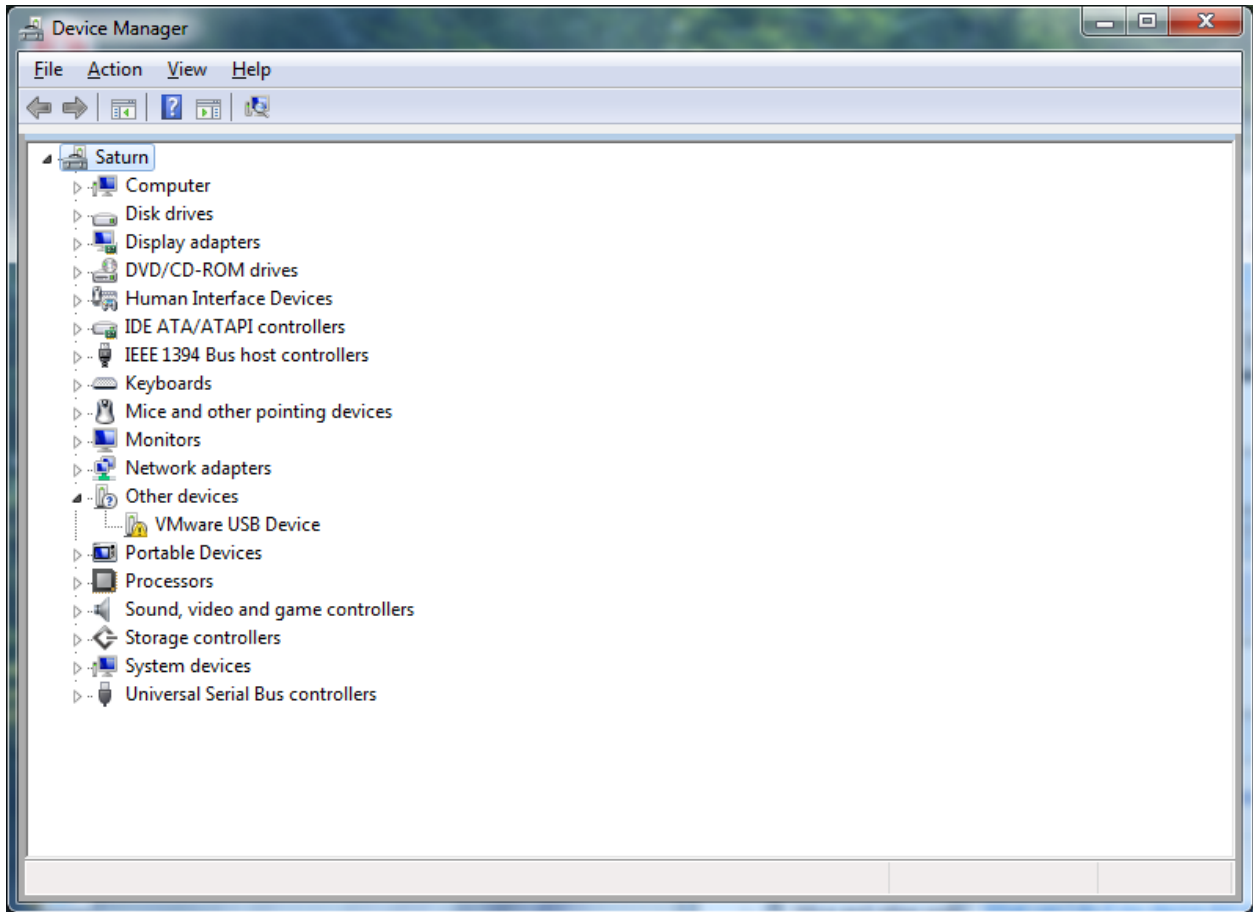

Shot from Device Manger within VM. No listing for iPhone

When I try to manually connect I see this and say OK

The above screen shot is from the HOST complaining it cannot load a driver to pass the USB device to the guest.

The above is a screen shot of the Device Manager within the HOST showing a problem with a device.

(the iPhone)
