

# VMware vSphere Product Feedback Group Program

## Introduction

vSphere and Cloud Platform Product Management are happy to announce the vSphere Product Feedback Group Program! The purpose of the program is to enable vSphere and SDDC customers to provide input into our product design throughout the product development cycle for existing and new vSphere, vSphere with Tanzu, VCF and SDDC products.

The PFG program will create a forum where the product team and the program participants will meet regularly via online conferences to review use cases for specific products and discuss technical topics. There will be opportunities to review proposed product functionality and enhancements and to explore strategic direction for our products in the future.

Program Participants will have

- Access to product management leadership, product managers, engineers, researchers and product designers
- An interactive forum to communicate feedback on VMware products, solutions and services
- The ability to understand design principles, roadmaps and priorities for the continued evolution of vSphere, VCF and/or SDDC products and solutions

Key requirements:

- Must be an existing vSphere, VCF or SDDC customer / user
- Commit time and resources to participate in 1-hour web conferences twice a month
- Accept the VMware Non-Disclosure Agreement
